

1APP Revenue Reactivation Sprint — Rod's Playbook

Status: Owner review required before client use. Pricing, caps, and compliance language must be approved by Tony and Justin before Rod quotes or signs a Sprint Agreement.

What This Is (say this to a business owner)

"You already paid to get those old leads and past customers sitting in your files. Most of them never bought, or bought once and never came back. We use AI-powered texting to reach back out and try to turn them into qualified estimate opportunities. There is no upfront setup fee. Messaging usage is disclosed before launch, and you pay only when a qualified appointment is kept and your business issues a documented written estimate. A booking or no-show does not count."

This replaces the generic 14-day starter-automation trial. The Sprint is a performance-based engagement built around a business's existing dormant contact list. A business without a usable dormant list can still buy a scoped implementation, but it is not offered a generic free trial.

Where This Idea Comes From — and Where We Changed It

[likely] The mechanics researched below come from Dan Wardrope's *The Instant AI Agency* material (a paid guide on AI-powered micro-agencies), cross-checked against a third-party review and reader excerpts. Treat the specifics below as directional, not verified financial results:

- The book's core method: approach a business, ask if they have old/dormant leads, offer to turn them into sales using AI + SMS ("Sales Android"), and propose a backend profit share — **up to 50%** of the resulting sale.
- Partner-fit criteria used in the book: sells a product/service with high margin, average sale over \$1,000 (unless high-volume e-commerce), already advertising and generating fresh leads, has a database of **1,000+ contacts**, and closes at a **30%+ rate**.
- The pitch line used: "Would you prefer 100% of nothing, or 50% of \$100k?"

Tony's decision, and why: a raw 20–50% fee applied to total contract value breaks down on large jobs. A \$200,000 renovation at 50% is a \$100,000 fee—likely more than the contractor's entire profit. **Until estimate-to-payment tracking is live, 1APP uses fixed cost-per-verified-estimate pricing.** That gives both sides a result they can independently document without trusting self-reported revenue. Revenue-share pricing remains a future connected option, not something Rod may quote now.

Eligibility Checklist — Ask Before You Pitch

A business is a good Sprint fit if most of these are true:

- [] Sells a product or service with healthy margin (rough guide: 25%+ gross margin)
- [] Has at least **250 dormant contacts** (old leads and/or past customers who haven't bought or returned in 90+ days); **1,000+ is ideal but not required**
- [] Can realistically run and close an appointment once it's booked (existing sales process, even informal)
- [] The dormant list is contactable — real names, real phone numbers, not a stale export with no way to verify who's on it
- [] Willing to confirm real outcomes (appointment kept, job signed, payment collected) so 1APP can invoice accurately
- [] Willing to attest to lawful basis to contact these people (see Compliance, below)

Do not pitch the Sprint to: businesses with no dormant list, businesses in regulated advice/financial/legal/medical/insurance categories without a full separate compliance review, or businesses unwilling to confirm outcomes for billing.

Secure Contact-List Handoff — Rod's Client Script

Rod never asks a client to email, text, or WhatsApp a complete phone address book. The client uses the private 1APP upload page and sends only the business contacts approved for the Sprint.

Read this aloud to the client:

"We need only the past leads and customers your business is allowed to contact—not your whole personal phone book. I'll send you a secure 1APP upload link. If your contacts are on Android or Google, export the selected contacts as a CSV. If they are on an iPhone, export them from iCloud Contacts as a vCard. Open the link, choose the file, check the two confirmation boxes, and press Upload. If you get stuck, stop there and I'll walk you through it."

Android or Google Contacts — simple instructions:

1. On a computer, open `contacts.google.com` and sign in.
2. Create a label named **1APP Reactivation**.
3. Add only the approved past leads and customers to that label.
4. Click **Export**, choose the **1APP Reactivation** label, and select **Google CSV**.
5. Open Rod's secure 1APP link, choose the downloaded `.csv` file, complete the confirmations, and press **Upload**.

iPhone/iCloud — simple instructions:

1. On a computer, open `icloud.com/contacts` and sign in with the Apple account used for the contacts.
2. Select only the approved past leads and customers.
3. Choose **Export vCard**.
4. Open Rod's secure 1APP link, choose the downloaded `.vcf` file, complete the confirmations, and press **Upload**.

Rod's checklist:

- Send the client the secure upload link generated inside the 1APP Quote & Technical Handoff Builder.
- Tell the client to exclude personal contacts, employees, active opportunities, recent estimates, and anyone who opted out.
- The client must check both written confirmations on the upload page before the file is accepted.
- When the upload succeeds, the client receives a private receipt link. Rod copies that receipt into **Private contact-list receipt** in the builder and changes the status to **Uploaded — receipt received**.
- Do not download the list to Rod's phone or move it through email, WhatsApp, or ordinary shared folders.
- Anyone who has the private receipt link can download the file until it expires. Treat the link as confidential and place it only in the approved 1APP handoff.
- If the client cannot separate business contacts from a personal address book, stop and schedule a guided screen-share. Never tell them to upload everything for 1APP to sort out later.

Current Fee Model — Cost Per Verified Estimate

This is the only default Sprint pricing model until 1APP's estimate-to-payment tracking is live and tested. Rod does not quote revenue share, gross-profit share, or a percentage of a sale during this temporary phase.

The client pays a fixed fee only when all three conditions are true:

1. The Sprint contact keeps the agreed qualified appointment.
2. The contact meets the written qualification rules agreed before launch.
3. The business issues a written estimate containing the customer reference, date, and estimate amount—normally within 48 hours of the appointment.

A booking by itself is not billable. A no-show, cancellation, duplicate, active pre-Sprint opportunity, unqualified contact, verbal price, or estimate without evidence is not billable.

Standard Pricing Bands

Rod selects the band using the client's **average collected job value**, not its highest job, quoted pipeline, or hoped-for contract value.

Average collected job value	Standard fee per verified estimate	Control
Under \$1,000	\$25	Owner review required; low-ticket economics may not support the Sprint
\$1,000–\$2,499	\$50	Standard
\$2,500–\$4,999	\$100	Standard
\$5,000–\$9,999	\$200	Standard
\$10,000–\$24,999	\$300	Standard
\$25,000–\$49,999	\$500	Tony/Justin approval
\$50,000–\$99,999	\$750	Tony/Justin approval
\$100,000+	\$1,000	Owner review and custom written terms required

These are ceilings, not automatic prices. The quote builder calculates a lower recommendation when the client's margin or close rate does not support the full band.

Economic Check

Use the client's real historical inputs where available:

Expected gross profit per estimate = average collected job value × gross margin × estimate-to-sale close rate

Recommended 1APP fee = expected gross profit per estimate × 20%

Round the result to the nearest \$25 and never exceed the standard band above. If the client cannot provide credible margin and close-rate data, use 35% gross margin and 30% estimate-to-sale as provisional assumptions, label them as assumptions, and require owner approval.

Example: average collected job is \$10,000, gross margin is 35%, and 30% of estimates close. Expected gross profit per estimate is \$1,050. Twenty percent is \$210, rounded to **\$200 per verified estimate**.

Campaign Ceiling

The quote may include a maximum total Sprint fee so the client knows its worst-case exposure. Once the ceiling is reached, 1APP pauses additional billable estimates until the client approves an extension in writing. The ceiling does not turn unqualified or undocumented estimates into billable results.

Fee Model Decision Tree (for Rod, in the moment)

1. Ask: "What is the average amount you actually collect on a completed job from an estimate?"
2. Ask for the typical gross margin and historical estimate-to-sale close rate.
3. Enter those figures into the quote builder. Use its recommended fee unless Tony and Justin approve a different amount.
4. Read the verified-estimate definition back to the client and agree on the evidence source.
5. Set a weekly reconciliation day and name the client-side person who approves the estimate list.
6. If the average job is under \$1,000, over \$25,000, or the economics are unclear, stop and get owner approval before quoting.

7. Never imply that a booked appointment alone is billable unless an owner-approved exception is written into the quote.

Niche Fit and Recommended Starting Structure

Use this as a quoting starting point, not an automatic rate card. The client's average completed-job value, margin, database quality, sales capacity, attribution quality, and compliance risk control the final terms.

Niche	Strong dormant-list opportunity	Recommended first offer	Primary proof metric	Watch-outs
Roofing, waterproofing, windows/siding	Old estimates, inspection leads, deferred projects	\$200–\$750 per verified estimate based on average collected job value	Kept qualified appointment + written estimate	Seasonality, insurance work, very large contracts
HVAC, plumbing, electrical	Unapproved quotes, maintenance customers, equipment age lists	\$100–\$300 per verified replacement/project estimate	Kept qualified appointment + written estimate	Emergency leads are not dormant; exclude active estimates
Landscaping, decks, fences, pools	Prior quotes and seasonal customers	\$100–\$300 per verified design/project estimate	Kept qualified appointment + written estimate	Weather, season, capacity, long decision cycle
Cleaning, pest control, detailing	Lapsed recurring customers and one-time buyers	Usually \$25 per verified estimate; owner review required	Kept qualified appointment + written estimate	Low ticket economics may not support this model
Auto repair/body, appliance service	Declined work, maintenance-due lists	\$25–\$100 per verified estimate	Kept qualified appointment + written estimate	Safety-related language; avoid misleading urgency
Dental, chiro, physio, clinics	Lapsed patients and incomplete treatment plans	Flat kept-appointment fee only after dedicated compliance review	Kept appointment	Health privacy, professional advertising, consent, sensitive data
Med spa, salon, fitness	Lapsed customers, memberships, consultations	Fixed fee per kept qualified consultation only after owner/compliance review	Kept consultation	Promotion rules, discounting, opt-out burden
Real estate, mortgage, insurance, legal, financial	Old inquiries and inactive prospects	Do not quote without Tony and compliance/legal review	Case-specific	Licensing, solicitation, privacy, recordkeeping, attribution disputes
Home renovation/custom construction	Old design consultations and deferred quotes	\$300–\$1,000 per verified estimate; owner approval above \$500	Kept qualified consultation + written estimate	Long attribution, scope changes, margins vary widely
B2B local services and commercial contractors	Old proposals, inactive accounts, renewal lists	\$200–\$1,000 per verified proposal/estimate; custom qualification rules	Qualified meeting + written proposal/estimate	Multi-touch sales cycles and disputed attribution

Best first niches for 1APP: roofing/waterproofing, HVAC, plumbing, electrical, landscaping/decks/fences, cleaning, pest control, and other local services with a clear booking or estimate step. They have understandable economics, visible dormant opportunities, and a natural upgrade path into the broader 1APP system.

Sprint Timeline (14 Days, Then Attribution Tracking Continues)

Day	What happens
Day 0	Sprint Agreement signed. Client provides the dormant contact list and confirms lawful basis to contact them. Client sets up (or grants) a way for 1APP to log outcomes.

Day	What happens
Day 1–2	1APP builds and tests the AI SMS sequence for this business's niche and offer. Internal QA.
Day 3	Messaging launches to the approved dormant list.
Day 3–14	AI qualifies replies, handles objections, and books appointments. Rod/Tony monitor daily.
Day 14	Outbound messaging window closes. No new contacts are messaged after Day 14. Appointments already booked still count.
Day 14 → end of attribution window (per tier)	Track kept appointments → signed jobs → collected payments.
Weekly during the attribution window	Client and 1APP reconcile the verified-estimate ledger. 1APP invoices only approved, evidenced estimates, subject to the campaign ceiling.
End of attribution window	Results review meeting — this is the natural next "coffee date" to quote the full 1APP system (missed-call rescue, booking, follow-up, reviews, pipeline, reporting).

Attribution and Billing Rules — Non-Negotiable

- Every contacted person is tagged with a unique Sprint campaign ID before the first message goes out.
- A contact only counts if: they were on the **approved dormant list**, they had **no active open opportunity or current service agreement** with the business in the 90 days before the Sprint, and the booked/won outcome is logged with a timestamp.
- During the temporary cost-per-estimate phase, the fee is billed only after a **verified estimate** meets the written definition and appears in the weekly reconciliation ledger.
- A later sale, refund, cancellation, or loss does not change a properly earned estimate fee because 1APP is being paid for producing the verified estimate opportunity—not guaranteeing the client's close.
- Duplicate estimates for the same contact and substantially the same project count once unless a new appointment and materially different scope are documented.
- Every one of these rules goes into the written Sprint Agreement before any message is sent. Rod never runs a Sprint on a verbal handshake.

Compliance — Read Before Every Pitch

"Old leads" does not automatically mean 1APP has permission to text them. In Canada, commercial text messages are Canadian Anti-Spam Legislation (CASL) commercial electronic messages. [likely] CASL generally requires either express consent, or a limited implied-consent window (commonly cited as up to 2 years for an existing business relationship, or about 6 months following an inquiry) — verify current CASL guidance before relying on these windows, since this summary is not legal advice. Every message must clearly identify the business sending it and include a working way to opt out.

Rod's job is not to make this determination himself. Rod's job is to:

1. Tell the business owner, plainly, that they are responsible for confirming they have a lawful basis to contact each person on the list.
2. Get that confirmation in writing as part of the Sprint Agreement (a checkbox/attestation, not a verbal "yeah it's fine").
3. Make sure the messaging itself always identifies the business and always includes an opt-out.
4. Immediately stop messaging any contact who replies STOP, asks not to be contacted, or is on a suppression list.
5. Escalate to Tony before running a Sprint for any business in a regulated category (insurance, financial services, legal, medical/dental, mortgage) — these need a dedicated compliance review before Rod quotes anything.

The Pitch Script

Opener (personalize this):

"Hey [Name] — that [specific job] you did on [Street/neighbourhood] looked incredible. I was curious — do you have a stack of old leads or past customers that never turned into another job?"

Soft ask:

"Would you be open to us turning some of those old leads into new jobs for you, on the back end, using AI texting — at no cost unless it actually works?"

Framing close (use exact structure):

"There is no upfront setup fee. We agree on a fixed amount for each qualified appointment that is kept and results in a written estimate. A booking or no-show does not count, and we can set a campaign ceiling so you know your maximum cost before we start."

Move to a working session (this is the "coffee date"):

"Let's grab 20 minutes so I can show you exactly how it works and we can look at your list together."

Do not promise a dollar figure, a close rate, or a guaranteed result. Every projection is a hypothesis based on the client's own numbers, same as the ROI rules in Document 08.

Objection Handling

- **"Why would I pay before the job closes?"** → "You are not paying for a calendar booking. You pay only after the prospect keeps the qualified appointment and your team issues a documented estimate. Until payment tracking is fully connected, that is the cleanest result both sides can verify."
- **"What if your AI annoys my old customers?"** → "Every message identifies your business by name and includes an easy way to opt out. Anyone who says stop is removed immediately and permanently."
- **"What if the estimate does not close?"** → "The fee is for creating a verified estimate opportunity from a dormant contact. Your team's pricing, sales process, availability, and closing are outside 1APP's control, which is why the amount is a small fraction of the expected gross profit per estimate."
- **"Can this run away and cost me too much?"** → "No. We can place a written campaign ceiling in the agreement and pause billable estimates when it is reached unless you approve an extension."

After the Sprint: The Real Goal

The Sprint is a low-risk way in the door. The real business is the full 1APP system. Once a Sprint produces a booked appointment or a sale, Rod moves immediately to:

1. Show the specific result (which contact, what happened, what it was worth).
2. Ask: "Want this working on every new lead coming in, too — not just the old ones?"
3. Quote the appropriate catalogue automations or bundle from Document 05, using the value/ROI framing from Document 08.
4. Use the existing quote → onboarding → technical handoff flow so nothing is re-entered.

Rod's Quick-Reference Card

- Sprint = no upfront setup fee, disclosed messaging usage, and a fixed fee per verified estimate; dormant-list only.
- Do not quote revenue share until Tony confirms estimate-to-payment tracking is live and approved for that client.
- Use the job-value bands plus the margin/close-rate calculator; never exceed the band without written owner approval.
- State the verified-estimate definition and campaign ceiling out loud.

- A booking alone is not billable. The qualified appointment must be kept and a written estimate must be evidenced.
- Get the compliance attestation signed before any message goes out.
- Escalate regulated-industry prospects to Tony before quoting anything.
- The Sprint's real job is to earn the next conversation about the full 1APP system.

Research Notes and Source Limits

- Dan Wardrope official pages reviewed: <https://instantaiagency.com> and <https://danwardrope.com>. The public material supports the core dormant-database, AI/SMS, backend-performance-deal positioning.
- Public descriptions, promotional copy, interviews/reviews, and reader excerpts describe concepts such as the "Sales Android," the low-friction working-session/"coffee date" close, partner-fit filters, and profit-sharing language. These are marketing/educational claims—not audited performance data.
- No independent evidence was found that a 20–50% share of total contract value is an accepted standard across trades. 1APP therefore does **not** copy that headline rate; it uses collected-revenue/gross-profit bases, tiered rates, and hard caps.
- Canadian consent guidance reviewed: Government of Canada CASL guidance at <https://ised-isde.canada.ca/site/canada-anti-spam-legislation/en/getting-consent-send-email>. A client attestation does not replace legal advice or 1APP's responsibility to use proper identification, unsubscribe handling, and suppression controls.
- Pricing in this playbook is a controlled temporary recommendation. Tony and Justin should review it after the first five Sprints using real reply rate, booking rate, show rate, verified-estimate rate, estimate-to-sale rate, average collected job value, gross margin, messaging cost, and 1APP labour.
