

Peterborough Waterproofing Automation & Lead Response Plan

Prepared by Tony's Business Solutions

Prepared for: Belinda Scollick and Justin Roffey **Prepared by:** Tony DeCarlo, Tony's Business Solutions

Purpose: Show how Peterborough Waterproofing can save time, respond faster to customers, organize leads, and reduce missed opportunities using a simple business automation system.

The Main Goal

Peterborough Waterproofing does not need more complicated software. The goal is a simple system that helps the business respond quickly, stay organized, and give Justin and the team more time back.

Tony's Business Solutions helps local service businesses automate the repetitive parts of customer communication, including:

- Missed-call follow-up
- Text and email responses
- Estimate request handling
- Appointment confirmations
- Appointment reminders
- Lead organization
- Customer follow-up
- Review requests
- Mobile access for the team

The system is designed to support the team — not replace the team.

Why This Matters for Peterborough Waterproofing

When someone has water in their basement, foundation concerns, moisture issues, or possible mold problems, they usually want help quickly. If a call is missed or a response is delayed, that customer may call the next company.

This is about protecting the leads Peterborough Waterproofing already earns through reputation, referrals, Google searches, and local trust.

The system helps make sure:

- Missed calls do not sit unanswered.

- Customers receive a fast, professional response.
 - Estimate requests are easier to capture.
 - Follow-up happens consistently.
 - Belinda and Justin can see conversations and appointments in one place.
 - The team spends less time chasing messages manually.
-

What the Customer Experience Can Look Like

1. A Customer Calls

A customer calls Peterborough Waterproofing because they need help with a waterproofing, foundation, basement, or moisture issue.

If the team answers, the call works like normal.

If the call is missed, the system can automatically send a professional text response within seconds.

Example:

“Hi, thanks for calling Peterborough Waterproofing. Sorry we missed you. Are you looking to book an estimate or speak with someone about a waterproofing issue?”

2. The Customer Responds

The system can collect basic details such as:

- Name
- Phone number
- Address or service area
- Type of issue
- Best time to follow up
- Whether they want to request an estimate

3. The Lead Gets Organized

Instead of the lead living only in someone's call log or text messages, it can be saved into a simple contact record.

The team can see:

- Who contacted the business
- What they need help with
- Whether they were contacted
- Whether an estimate was booked
- What follow-up is needed next

4. Estimate Booking or Callback

Depending on how Peterborough Waterproofing wants to operate, the system can either:

- Guide the customer toward booking an estimate, or
- Collect the information and notify the team to follow up personally.

This gives the business control over how automated or hands-on the process should be.

5. Appointment Confirmations and Reminders

Once an estimate or appointment is booked, the system can send:

- Confirmation messages
- Reminder messages
- Follow-up messages if needed

This helps reduce forgotten appointments and keeps customers informed.

6. Follow-Up and Reviews

After the job or estimate process, the system can support follow-up and review requests.

Examples:

- Follow up with leads who have not booked yet.
 - Follow up after an estimate.
 - Ask happy customers for a Google review.
 - Keep customer communication organized for future reference.
-

What the Team Can Use From the Mobile App

Once the system is built, the team can use the mobile app day-to-day.

From the app, the team can:

- View and reply to customer texts, emails, and messages.
- Make and receive business calls.
- See customer contact details.
- Add notes after calls.
- View and manage appointments.
- Create and manage tasks.
- Send review requests.
- Respond to reviews.
- Check lead status.
- Get push notifications for new messages, calls, tasks, and appointments.
- If Justin or Belinda are busy, away, or on vacation, the business number can be forwarded or routed to another approved staff member so they can respond, manage conversations, and keep leads moving through the app.

A helpful way to think about it:

Desktop is where the system is built. The mobile app is where the team uses it every day.

Staff Coverage When Justin or Belinda Are Away

If Justin or Belinda are busy, on a job, away from the phone, or on vacation, the business number does not have to stop with them.

The system can be set up so calls, texts, and lead notifications can be forwarded or routed to another approved staff member. That person can respond, manage conversations, check appointments, and keep leads moving through the mobile app.

This helps Peterborough Waterproofing keep communication moving even when the main decision-makers are unavailable.

Benefits:

- The business is not dependent on one person being available.
 - Leads can still be answered quickly.
 - Staff can help manage customer communication without using personal phones.
 - Customer conversations stay organized in one place.
 - The customer experience stays consistent when someone is away.
-

What a Pipeline Is

A pipeline is a simple visual tracker that shows where each lead or customer is in the process.

Example stages for Peterborough Waterproofing could be:

1. New Lead
2. Contacted
3. Estimate Booked
4. Estimate Completed
5. Quote Sent
6. Job Won
7. Job Lost
8. Follow-Up Needed

It works like moving cards from one stage to the next.

This helps the team quickly see:

- Who needs a callback
- Who has an estimate booked
- Who is waiting on a quote
- Who needs follow-up
- Which opportunities are active

The main value is visibility. Nothing has to live only in memory, voicemail, or scattered text threads.

Two Setup Paths for the Phone Number

There are two clean ways to set up the phone system.

Option 1 — Automate the Existing Business Number

This is best if Peterborough Waterproofing wants customers to keep using the current public business number.

Typical timeline: **2–3 weeks**

Why it takes longer:

- The number needs to be checked for eligibility.
- The number may need to be connected or ported.
- Business texting registration may be required.
- Call routing and text delivery need to be tested before launch.

This path is a good fit if keeping the current number as the main number is the priority.

Option 2 — Use a New Dedicated Business Automation Number

This is the fastest option.

Typical timeline: **3–7 business days after required details are collected**

Why it is faster:

- A new number can be set up directly inside the system.
- Calls and texts can be tested quickly.
- It separates business communication from personal phones.
- The current business number can still stay in place while the new number handles automation.

This path is a good fit if speed, separation, and clean organization are the priority.

What A2P Means in Plain English

A2P means “Application-to-Person” messaging.

In plain English, it is the business texting approval process carriers use to verify that a real business is sending legitimate messages.

It helps reduce spam and improves the chances that automated business texts are delivered properly.

This may be required when a business wants to send automated text messages through the system.

Setup Timeline

Phase 1 — Discovery and Planning

Timeline: **Day 1**

The goal is to understand how Peterborough Waterproofing currently handles calls, estimates, follow-up, and admin.

Tony will confirm:

- What problem needs to be solved first
- Who answers calls now
- How missed calls are handled
- How estimates are booked
- Who needs app access
- Whether to use the existing number or a new dedicated number

Phase 2 — Information Collection

Timeline: **Days 1–3**

Tony will collect the business details needed to build the system.

This may include:

- Business contact details
- Services offered
- Service area
- Business hours
- Estimate availability
- Team members who need access
- Preferred message wording
- Common customer questions
- Current phone number details
- Logo or branding if needed

Phase 3 — Build and Testing

Timeline: **Days 3–7 for a new dedicated number** Timeline: **2–3 weeks if automating the existing business number**

Tony builds and tests the system before it goes live.

This can include:

- Phone number setup
- Missed-call text-back
- Estimate request flow
- Calendar or callback process
- Appointment confirmations
- Appointment reminders
- Lead pipeline
- Mobile app access
- Notification settings

Phase 4 — Team Review

Timeline: **Before launch**

Tony walks the team through how everything works.

The team reviews:

- Customer messages
- Lead flow
- Notifications
- Calendar/estimate process
- Mobile app usage
- Any final changes before launch

Phase 5 — Go Live

Timeline: **After testing and approval**

The system starts handling real customer activity.

The launch should be controlled and simple:

- Start with the most important workflow first.
- Monitor early calls and messages.
- Adjust wording or routing if needed.
- Keep the system easy for the team to use.

Phase 6 — Optimize

Timeline: **After real use begins**

Once the team sees real customer activity, Tony can refine the system.

Possible improvements:

- Better follow-up messages
 - Review request automation
 - More detailed pipeline stages
 - Invoice/payment workflows
 - Additional reminders
 - More advanced lead nurture
-

What Good Looks Like

A good system is not the most complicated system. A good system is one the team actually uses.

For Peterborough Waterproofing, good looks like:

- Missed calls receive a response within seconds.
 - New leads are easier to track.
 - Estimate requests are not buried in voicemail or text threads.
 - Belinda can see what needs follow-up.
 - Justin gets fewer unnecessary interruptions.
 - Customers receive clear, professional communication.
 - Appointment confirmations and reminders happen automatically.
 - The team has better visibility from their phones.
 - Follow-up becomes consistent instead of relying on memory.
-

What Tony Needs From Peterborough Waterproofing

To build the system properly, Tony will need:

- Business name and contact information
- Current phone number details
- Decision on phone path: existing number or new dedicated number
- Business hours
- Service area
- Main services offered
- Estimate process
- Calendar availability
- Team members who need access
- Common customer questions
- Preferred wording/tone for messages
- Who should receive lead notifications
- Logo or branding if available

The more clearly the business process is mapped upfront, the smoother the setup will be.

Quote — Complete Automation & Lead Response System

Recommended package: Full Automation Setup for Peterborough Waterproofing **Prepared by:** Tony's Business Solutions

This quote is for a complete lead response and customer communication system designed to help Peterborough Waterproofing capture more calls, respond faster, organize leads, and reduce manual admin work.

Included in the Setup

- Dedicated business automation number or existing-number automation setup support.
- Missed-call text-back system.
- Customer text and call response flow.
- Estimate request or booking flow.
- Appointment confirmation messages.
- Appointment reminder messages.
- Lead pipeline setup.
- Mobile app access for approved team members.
- Staff routing/forwarding setup when Justin or Belinda are busy, away, or on vacation.
- Basic contact records and conversation history.
- Follow-up messages for leads who do not book right away.

- Review request automation.
- Monthly performance reporting.
- Initial team walkthrough and system training.
- Post-launch adjustments after real customer activity begins.

Recommended Monthly Package

Full Autopilot Package — \$597/month

This includes:

- Missed-call text-back
- Booking/estimate request system
- Appointment confirmations
- Appointment reminders
- AI voice/call answering support if desired
- Lead follow-up
- Review request automation
- Monthly performance report
- Ongoing system support and adjustments

One-Time Setup

Implementation & Setup — \$750 one-time

This covers:

- Workflow mapping
- System buildout
- Phone number setup path
- Message writing
- Calendar/estimate flow setup
- Pipeline setup
- Mobile app setup
- Testing before launch
- Team walkthrough

Phone Number Path

Option 1 — New dedicated business automation number Fastest setup. Usually ready within **3–7 business days** after required details are collected.

Option 2 — Existing business number automation Best if Peterborough Waterproofing wants to automate the current public number. Usually a **2–3 week process** depending on carrier, eligibility, and registration requirements.

Estimated First Month Total

One-time setup: \$750 First month service: \$597 Estimated first month total: \$1,347 plus applicable taxes

After the first month, ongoing service would be **\$597/month plus applicable taxes**.

Optional Add-Ons

These can be added later if needed:

- Website updates or landing page buildout
- Additional automation workflows
- Invoice/payment workflow setup
- Social media support
- Paid ad support
- Advanced reporting
- Additional staff onboarding

Notes

This quote is built around the full recommended system. If Peterborough Waterproofing wants to start smaller, the system can be phased in by starting with missed-call text-back, appointment reminders, and basic lead organization first.

Recommended First Step

The best first step is a simple workflow map.

Tony will map what happens when a customer:

- Calls during business hours
- Calls after hours
- Misses the team and needs a callback
- Wants to book an estimate
- Needs appointment reminders
- Does not book right away
- Needs follow-up after an estimate

Once that flow is clear, Tony can build the system around how Peterborough Waterproofing actually operates.
